

Executive Synthesis

- Outcome: Expansion to two adjacent segments can add \$42-58M ARR over 24 months with controlled CAC paybac
- Growth in core segment is slowing from 22% to 11%, requiring mix diversification.
- Win-rate analysis indicates Segment B has 1.8x conversion versus Segment C at current positioning.
- Main constraint is onboarding capacity, not demand generation; implementation throughput is now the criti
- Recommendation: prioritize Segment B first, then phase Segment C after onboarding redesign in Q3.
- Risk: dilution of enterprise focus; mitigation: dedicated enterprise pod and pricing guardrails.
- Decision required this quarter: approve phased expansion and enablement investment envelope.

SWOT Assessment

Strength: Net retention in enterprise accounts remains 118% with low logo churn.

Weakness: Time-to-value averages 61 days, 2.2x peer benchmarks.

Strength: Net retention in enterprise accounts remains 118% with low logo churn.

Opportunity: Mid-market compliance segment growing 17% annually with low incumbent depth.

Threat: Competitors bundling implementation services at discounted rates.

Option Tradeoff

- Option A (Broad expansion): fastest top-line upside, highest execution risk, weaker focus.
- Option B (Phased expansion): moderate upside, stronger conversion confidence, manageable capacity risk.
- Option C (Core-only optimization): lowest risk, but limited growth headroom.
- Criteria weighting: growth potential (35), execution risk (30), payback speed (20), strategic fit (15).
- Recommendation: Option B because weighted score is highest under base and downside assumptions.

Implementation Roadmap And Risks

- Month 0-2: finalize segment playbook and enable dedicated GTM pod.
- Month 2-4: redesign onboarding workflow and reduce handoff latency by 30%.
- Month 4-6: launch Segment B with weekly conversion and cycle-time governance
- Month 6-9: readiness gate for Segment C based on capacity and payback metrics
- Key risk: onboarding queue overload; mitigation: capacity trigger threshold
- KPI set: ARR pipeline quality, conversion, CAC payback, onboarding cycle time
